

Author(s) ^P GILLABOZ, [?]Title Dissertation monographique sur le stratoides aloïdes de Linnaeus.Abbreviated reference Mém. Soc. Émul. Cambrai 1822: 24-25. ^{Feb.} 1823.

MLP 3441

Notes Abstract of Gillaboz paper, in which he debates whether the stamens in stratoides aloïdes were epigenous or perigynous. Le Glay's comments on it are in a footnote, ^{p. 21} i.e. that the authors of the Flore française doubted whether the plant had these types of stamens. They also regarded as rather unnatural the order Hydrocharidaceae. (Fl. fr. 3e édit. t. 3, p. 265).
