Title Sur une espèce d'Aubépine et une variété de Tuya; par M. Madiot.

MLP 2662

Abbreviated reference Compt. Rend. Trav. Soc. Roy. Agric. Lyon 1819/~~1820~~: 139-141. 1820.

Notes Abstract.

Madiot had found a new variety of hawthorn in the Haut Beaujolais which he proposed to call Crataegus oxyacanthoides inermis. He thought it would be a good hedge plant since it did not push out horizontal roots which might starve adjoining crops.

The Tuya, described, came from the nursery of M. Poizat à la Guillotière.
