Title Sur le Carex plantaginea; par M. De Moidière.

MP 2662

Abbreviated reference Compt. Rend. Trav. Soc. Roy. Agric. Lyon 1822/¹⁸²³: 120-121. 1823.

Notes Abstract of D.M.'s communication about Carex plantaginea which he and Madiot had found in 1803 on his land. As the plant was originally an inhabitant of North America no one could guess how the plant got there. For many ^{succeeding} years no trace was found of it again until in 1822 Madiot, who was botanising there, found it again, but 600 paces from its original location. Several roots had been planted in the departmental nursery and Tissier, Grogner and Pelletier had been detailed to describe its characteristics.
