Grogner, Louis Furcy

Title Notices sur les travaux de la Société royale ... Lyon, pendant le cours de l'année 1832 ...

Abbreviated reference ^{MLP 930} Mém. Soc. Roy. Agric. Lyon 1832 ^{Prem. Pt.} II : 1-50. 1 pl. 1833.
^

Notes

Bonafois had found that a species of the mulberry tree, a little known variety, might be cultivated in place of the white mulberry. Place of origin - the Philippines. B. proposed to call it morus cucullata, because of its cap-shaped leaves.. Gives advantages over the white mulberry. pp.7-10.

Fréminville had continued work on the rot in wheat, pp. 14-16.

Seringe (Professor of Botany and Director of the Jardin des Plantes, Lyon) had made an interesting statement on the anatomy of the labiata, pp. 29-30. He had also given the comparative descriptions of 2 new exotic plants, strelitzia reginae & ovata; descriptions given here, pp.30-31. Separate B.-form.
