

BIBLIOGRAPHIA HUNTIANA / Form B — Botanical articles

Author(s) G.T. ^p T.G.

Title Suite des faits nouveaux observés dans le Muséum^{national} d'Histoire Naturelle. Floraison de plantes nouvelles. ✓

Abbreviated reference ^{MHP 482} Décade Philos. 1798/ 99. IV(32): 257-259. 1798/ 99 [7 Aug. 1799]

Notes Flowering of new plants:

Epidendrum ciliare - parasite plant growing on the trees of S. America.

Mimosa Unguis Cati -

Halophyllus racemosus of Cavanilles

Homalium racemosum, Jacquin.

Cordia Subcordata

Mathiola scabra - tropical pl.

Rondelletioides - new genus found by Richard in America.

Hibiscus, new species, not specified.

Pectis ciliaris, new species, from S. America

Gronovia Scandens, from S. America

A curious species of Geranium from Botany Bay. All these plants were actually in bloom and Redouté was occupied in painting them for the Museum's collection. ^{JEAN} 13 Dec. 71
